Knowing the Right Linux Distro for Every Kind of Tech User

By **Zed Pro** - February 8, 2021 358 0

Any user who wants an OS that can cater to all their specifications turns to Linux. In fact, it's this easy customization that has led to the slow but gradual increase in Linux users over the years — specifically those that use it for programming and other system activities. Tech Republic's report even highlights the rise of Linux OS-specific laptops to cater to this growth. But with so many builds available, how do you know which one is the right option for you?

Today, we'll outline some of the best distros for every kind of tech user.

Modicia

Modicia is a Xubuntu-based Linux distro for multimedia professionals, making it a great option for those who dabble in UI design. It comes with a ton of free software revolving around graphics and interfaces, from audio libraries to interactive menus. Modicia is also one of the few systems that support Figma-Linux — one of the best UI and graphic UX design tools in the market.

Modicia is so user-friendly that anybody can use its features with little to no tutorials. In fact, its design is very reminiscent of macOS.

Any Linux OS may be customizable, but it'll be easier to tailor it to your needs if the base distro already has the essentials. Whether you're looking for an advanced programming build or an easy design setup, there's a Linux distro that can cater to your preferences.
